PA0000002	Payment	No payment
0x1D02	Doesn't Crash	
<p>I clicked on payment under the profile tab and it shows an error code.</p> <p>When a new user goes to their payment section because they have no payment options yet the only thing that is shown to them is an error code and the ability to add a card via a button.</p> <p>On line 65 in the Payment activity there is a set text that should be resolving this problem, but it is not.</p> <p>I think the reason this is not working is because we set the text to “No card found on profile” once the page is run and then we run our if statement to fill in the user’s payment data. Since the user does not have payment the if statement prints the error. If we include a check in the if statement as to whether or not the user has no card we can just print the message there. That way every time the page is loaded and the if statement runs if there is no payment it will print properly that there is no payment stored.</p>
