PA000001	Payment/PaymentAdd	Unkn Issuer
0xFFFF	Doesn't Crash	
<p>I added a form of payment to my profile and when looking at the information it shows unkn as part of the info.</p> <p>When the user is asked to enter their payment information there is no option to add an issuer to their card, but when you look at your payment list it always shows unkn for the issuer because you cannot enter an issuer.</p> <p>There is no line number in PaymentAdd because there is no text field asking for the information from the user.</p> <p>In Payment line 81 is the if statement and line 82 is where the information is printed. Since there is never an issuer it will always show as unkn.</p> <p>To fix this we either need to add the option to add an issuer in the PaymentAdd activity or we need to just remove the implementation of issuer on the Payment activity.</p>
