BU000002	Buy	Place Order
0xFFFF	Crashed	
<p>I tried to create an offer without putting in the product name, qty and product brand.</p> <p>When the user does not include a product name, quantity, or a product brand when trying to create an order the app either crashes or resets back to the home page.</p> <p>It looks like the main problem is on line 375.</p> <p>app.anybuy.Activities.BuyActivity\$4.onClick(BuyActivity.java:375)</p> <p>The error appears when the order object is being created. We have no error checking for the fields listed so if we added an if statement to check to make sure all of those fields were actually filled I am sure the app wouldn't crash.</p>
