AD000001	Address	No address
0x1D02	Doesn't Crash	
<p>I clicked on address under the profile tab and it shows an error code.</p> <p>When a new user goes to their address section since they have no addresses added to their profile the only thing it shows is an error code and the ability to add an address via a button.</p> <p>On line 64 there is code that should make the app print out “No address found on profile”, but it doesn't get printed out.</p> <p>I think the best way to fix this would probably be to move that set text field up to the first part of the if statement which runs from line 52 to 58.</p>
