BUMK0003	Buy	Place Order
0xFFFF	Crashed	
<p>I tried to create an order without putting in the user’s card info or the address info. Upon the app being freshly loaded.</p> <p>When the user does not include a payment option or an address the app either crashes or resets back to the home screen.</p> <p>It looks like the main problem is on line 274 and 383 and 384. at app.anybuy.Activities.BuyActivity.onCreate(BuyActivity.java:274) java.lang.NullPointerException: Attempt to invoke virtual method 'java.lang.String Object.Address.getL1()' on a null object reference at app.anybuy.Activities.BuyActivity\$4.onClick(BuyActivity.java:383) java.lang.NullPointerException: Attempt to invoke virtual method 'java.lang.String Object.Card.getCardNum()' on a null object reference at app.anybuy.Activities.BuyActivity\$4.onClick(BuyActivity.java:384)</p> <p>Having neither of these two pieces of information causes the app to crash from a fresh load of the app. If you have an address stored you get the error on line 274. If you have a payment added then the error appears on line 383. This should probably be fixed by adding an if statement to check to make sure that the user actually has all the fields filled out.</p>
