(Bug ID)BU000004	(Activity)add card page	(Function)add card
(Error code) 0xFFFF		(Crashed or not) not

(Description) When I try to add a new payment card in the new card page, I add a "/" between the month and year in the expiration part on the page and click add, the add card page will close and back to the payment information page, but there is no address just added on the payment page.
This bug happens because of the server's acceptation on the expiration time part. My suggestion is improving the ability of server's acceptation or separating the month and year on the front-end part.
