ISPAMK0001	PaymentAdd	Add Payment
0xFFFF		Doesn't Crash

I went to the payment page to add a new card. I only put in some numbers for the credit card number and pressed the add button.

If you put in any set of numbers for the credit card and leave it at that the app will successfully submit the card info even though all the other fields were not filled out.

No line error

This would be fixed by adding if statements to make sure that the user is actually filling out all the fields required for the payment information.
